Zero in on the peaks of Mount Everest or fly over your favorite city using Google's 3-D visualization software. Simply install Google Earth Pro, identify locations you would like to visit and navigate to them using your mouse and keyboard. As you explore Google Earth, you will see on-screen, 3-D representations of terrain, mountains, cities and objects as they exist in the real world. After enjoying a virtual tour, convert the tour into an AVI movie file and replay it later using any media player. [Have a question? Get an answer from online tech support now!](#) [Have a question? ## Tips & Warnings

-  Video resolution choices range from 320-by-240 to 1920-by-1080. Select higher resolutions for better image quality. Higher resolutions result in larger file sizes. Google also points out that higher resolution videos take longer to record.
